

GW431

Lantern Style
Solar Fence Lights

Information for use _____

Thank you for purchasing this product from Gardenwize. The instructions written below provide you with guidance on how to get best use of the product. We highly advise that you read these instructions before using the product.

Whats in the Box?

- Fence lights
 - Screws
 - Plugs
-

How It Works?

These fence lights have a solar panel situated on the top of the unit. During the day, the solar panel absorbs solar energy to charge the included rechargeable battery. At night, the LED light inside the fence light automatically illuminates and provides a dazzling display.

On First Use

Before using this product, remove the protective film from the solar panel.

We also advise that you fully charge the battery by placing the solar panel under direct sunlight for a full 24 hour period. To check if the light is working after this charging cover the solar panel with your hand and the light should turn on automatically.

Assembly Instructions

1. Take the product out of it's packaging.
2. Carefully remove the top of each fence light which has the solar panel. Locate the plastic tab where the battery compartment is, and remove this tab.
3. Find a suitable position on your garden fence where you can mount the fence lights.
IMPORTANT: please ensure the solar panel can get direct sunlight.
4. With the supplied screws and fixings, secure them on the fence walls.
5. Then mount the fence light via the fixings.

Where to Put This Solar Light?

The solar panel on these fence lights MUST be under DIRECT SUNLIGHT in order for the battery to charge.

We highly advise to avoid positioning the solar panel where there is a lot of shade or there is low light as this will prevent the battery from getting charged. And we also advise to not position the light near sources of artificial light that come on at night such as street lights as this will affect performance of the light.

Other factors such as weather conditions and the number of hours of daylight will also affect the performance as well.

Maintenance & Troubleshooting

- Make sure to pull out the “Insulation Tab”.
 - Keep the solar panel clean.
 - If a solar product does not light up after it has been used for around 8 – 12 months, replace the rechargeable battery as it may be weak or worn out. (Battery 1 pc “AA” 1.2V 600Mah, Ni-MH, Rechargeable). Never use another battery with a different spec.
-

Battery Replacement

1. Unscrew the battery compartment cover by using a Phillips head screwdriver (not included).
 2. Open the compartment carefully and ensure that the battery terminals are not damaged.
 3. Remove the old depleted battery and replace with 1 x new AA rechargeable battery.
 4. Secure the battery compartment in place using the screws.
-

ATTENTION: Batteries must be recycled or disposed of in accordance with your local authority guidelines. Do not dispose of these near an exposed heat source or open flame or into your normal household waste. Remove the battery from the product if it is to be stored for a long period of time. Removal and/or replacement of the battery should only be carried out by an adult or under adult supervision.

Health & Safety

- Do not use the lights if the insulation or bulb have been damaged.
- Never allow the product to come into contact with excessive heat or naked flame.
- This product is not a toy. Keep away from pets and children, ensuring that children are supervised at all times.
- When disposing of this product, please do so in line with your local authority guidelines.

Technical Specifications
