

Solar Fairies Under Lampost

Intention for Use

Thank you for purchasing the Gardenwize Solar-Powered LED Light Fairies Under Lampost Ornament. This garden ornament is intended for outdoor use only and can be placed in your garden area, patio and decking. It is designed to act as a decorative feature that illuminates at night, thanks to its LED solar light.

To get the best use out of this product, we recommend reading through all of the information in this document.

Product Elements

- Streetwize Garden Solar LED Light Fairies Under Lampost Ornament
- 1 x AAA 300mAh Ni-Mh Rechargeable battery

How Does The Streetwize Garden Solar LED Light Fairies Under Lampost work?

This product has a built-in solar panel that absorbs solar energy from the sun during the day which is then stored in the included rechargeable battery. Once nightfall occurs, the LED light comes on automatically to illuminate your garden.

Where is Best Place to Position the Solar-Powered LED Light Fairies Under Lampost.

The product is designed to be used outdoors. For optimum performance, ensure the built-in solar panel on the battery unit can get at least 8 hours of direct sunlight. This way, the rechargeable battery will get fully charged so that it can power the light at night.

We highly advise to avoid positioning the solar panel where there is a lot of shade or there is low light as this will prevent the battery from getting charged. And we also advise to not position the light near sources of artificial light that come on at night such as street lights as this will affect performance of the light.

PLEASE NOTE, when the rechargeable battery is fully charged. The LED light will work up to 6 hours. The LED light's performance is dependent on location, weather and season and it also depends on the amount of sunlight it has gained.

How to Set Up the Streetwize Garden Solar LED Light Fairies Under Lampost Ornament

Carefully remove the product out of its packaging. On doing so, do take care when handling the product to avoid any accidental damage.

1. Position the product where the built-in solar panel will get good sunlight.
2. When you have placed the product, turn the switch on at the base of the product.
3. Once switched on, cover the panel to test if the LED light comes on.

Maintenance & Troubleshooting

To get optimum performance from the solar panel, ensure the surface of the panel is kept clean.

If the LED light is not working at night, check to see if the solar panel is well-positioned and is getting enough sunlight and check to see if the panel is near another light source at night as this will affect performance. If so, reposition the ornament to where it can get enough light and is away from other light sources at night.

If after following the above step, the LED light is still not working, you will need to replace the rechargeable battery.

ATTENTION: DO NOT use a non-rechargeable battery for this product.

When First Using The Product

The battery in this product will have been fully charged by the manufacturer. However, on the date of purchase, the battery will lose its charge. For best performance, ensure the battery gets a full 8 hour charge by solar energy before using the product at night.

Battery Replacement

1. Locate the battery compartment on the base of the product (where the switch is).
2. Using a Phillips head screwdriver (not included), open the compartment carefully and ensure that welded wires inside the battery terminals are not damaged.
3. Remove the old battery and replace with one new AAA 300mAh Ni-Mh Rechargeable battery according to the +/- polarity.
4. Replace battery compartment cover, screw it back into position and make sure it is properly sealed.
